A. I. A. President, Glen Stanton,  
To Be Guest Speaker at  
Annual Dinner

Glen Stanton, President of The American Institute of Architects, will be guest speaker at the Banquet, the evening of Friday, February 20, in connection with the Fifth Annual Convention of the Wisconsin Architects Association, a Chapter of The American Institute of Architects. The banquet will be held in the Sky Room of the Plankinton House, 609 N. Plankinton Avenue, Milwaukee, the convention headquarters.

Members of the Association are especially pleased at the prospect of Mr. Stanton's visit, inasmuch as this will be the first time they have been honored by the presence of an A.I.A. President. As a matter of fact, no President of The American Institute of Architects has visited Wisconsin since 1935 when the former Wisconsin Chapter was host to the Annual Convention of The Institute in Milwaukee.

The Annual meeting of the Association will be held Thursday evening, February 19. The program for the Convention will be published in the February issue of the Wisconsin Architect.

\* \* \*

Noel Ross Safford

As the Wisconsin Architect containing the Roster of the Wisconsin Architects Association goes to press, it is with the deepest sorrow and regret that the name of one of the most prominent and beloved members is removed from the list.

Monday evening, January 12, Noel Ross Safford, 55, of Green Bay passed on following a sudden heart attack. He was a partner in the architectural firm of Foeller, Schober, Berners, Safford and Jahn, Green Bay.

Mr. Safford became affiliated with The American Institute of Architects in 1937. He had been a member of the two former organizations: the State Association of Wisconsin Architects and the Wisconsin Chapter, A.I.A., and was a charter member of the Wisconsin Architects Association.

Born in Black Creek, Wisconsin, he finished his schooling at Lawrence College and the University of Pennsylvania. He was a Thirty-Second Degree Mason and was affiliated with the De Pere Lodge.

This past December he was elected President of the Northeastern Division of the Wisconsin Architects Association.

Funeral services were held Thursday, January 15, at 2 P.M., at the Green Bay First Methodist Church.

Mr. Safford is survived by his wife, Nora, and son, Noel, Jr.

MEMBERS!

PLEASE MAKE OUT YOUR CHECKS TO THE  
WISCONSIN ARCHITECTS ASSOCIATION . . .  
NOT TO THE SECRETARY.

# America's Largest *Architectural* Concrete Project

This modern housing development in Los Angeles is the largest single architectural concrete project in the United States. The postwar phase of the development consists of eighteen 13-story cross-shaped units. Each unit contains 153 apartments. Earlier prewar construction consisted of studio-type, two-story units. In all, housing is provided for 13,000 persons in 4,253 apartments.

Architectural concrete was chosen for this job because of its firesafety, durability, good appearance and **low annual cost**. Only one set of forms was needed for each 13-story building.

Versatile architectural concrete is adaptable to buildings of any size, style or function. More and more architects are discovering that architectural concrete is an ideal medium for giving form to their finest designs.

For more information about architectural concrete write for free illustrated literature. Distributed only in U. S. and Canada.

Leonard Schultze & Associates, New York, architects. Gordon B. Kaufmann and J. E. Stanton, Los Angeles, associate architects. Bowen, Rule and Bowen, Los Angeles, structural engineers. Starrett Bros. and Eken, Inc., New York, general contractor.

**PORTLAND CEMENT ASSOCIATION**  
735 N. Water St., Milwaukee 2, Wisconsin

## December 1952 Exhibit of Wisconsin Architects Association on Display at Art Institute

Photographs and Plans of completed buildings submitted in the Wisconsin Architects Association's December 1952 Honor Awards Program will be on display at the Milwaukee Art Institute, 772 N. Jefferson St., until February 2. Later, they will be exhibited in Madison and following that showing, they will be exhibited in Green Bay.

Members are urged to drop in at the Art Institute to view the exhibit which is co-sponsored by the Wisconsin Architects Association and the Interior Decorators of Wisconsin.

Also on display is the Pittsburgh Plate Glass Company's "Industrial Niche."

The photograph of the Mead Hotel on the cover page won first prize for Donn Hougen in the February 1952 Honor Awards Program.

# Adequate Wiring is more than symbols on plans

Adequate Wiring is a planned and engineered wiring system . . . designed to "fit" a specific building. Adequate Wiring in Residential, Commercial or Industrial buildings "has what it takes" to meet the increasing demands for low cost electric service today, tomorrow and in years to come.

Adequate Wiring is more than symbols on plans.

Call DAly 8-6600 for Wiring or Electrical Information.

*Why it pays to use***STRAN-STEEL  
FRAMING****in all commercial and industrial  
CONSTRUCTION**The big advantage of Stran-Steel framing is *measurable* in time and money saved.You profit from the *nailability* of Stran-Steel framing—an exclusive patented feature.You see, your workmen can *nail* inside or outside material to Stran-Steel studs, joists and purlins. Often, sub-assemblies can be made by shop labor, speeding the final, on-the-site assembly of framing sections.

If you are interested in lower "in place" costs it will pay you to get our estimate on fabricating and erecting the steel framing needed in your new building. No obligation on your part.

**STRENGTH • SAFETY • UNIFORMITY • DURABILITY • FAST ERECTION****ARNOLD EQUIPMENT CORPORATION**2443 North 23rd Street

✓ Super-Ex — provides strong, straight nose held true by two semi-solid flanges.

✓ Super-Ex — combines expanded wing with solid sections. Note alternate perforations in solid portion — for better plaster key.

✓ Super-Ex — requires little or no plumbing; corrugations assure rigidity.

✓ Super-Ex — can be wired, stapled, spotted, or nailed to wall — no clips necessary.

Fire-safe construction at its best: improved Milcor Super-Ex Corner Bead, Milcor Metal Lath, and Milcor Steel Stud

# Improved

## MILCOR\*

### Super-Ex Corner Bead

**for longer plaster life, lasting plaster beauty**

**— now provides for greater depth of plaster adjacent to the bead — regardless of the plaster grounds!**

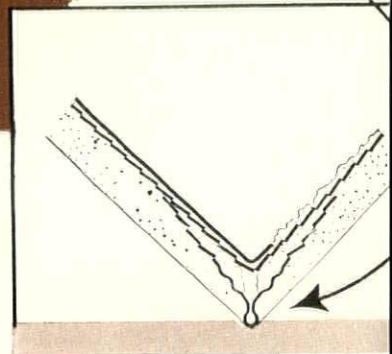

Improved Super-Ex Corner Bead, with its exclusive design, combines the rigidity of a solid wing with the added plaster reinforcement of expanded metal.

Super-Ex wings are formed at a minimum angle of 60° (max. 70°) for spring fit on a 90° corner, and easy adaptability to specified plaster grounds,

whether  $\frac{3}{4}$ ",  $\frac{5}{8}$ ", or  $\frac{1}{2}$ ".

Milcor Super-Ex goes on fast . . . reduces erection costs . . . protects corners against cracking, chipping . . . assures straight, true-edge beauty.

Standardize on Super-Ex in your specifications.

Here's why Super-Ex corners are strong: last longer: note greater depth of plaster adjacent to bead area . . . spring fit adapts easily to any specified depth of plaster ground — whether it be  $\frac{3}{4}$ ", or  $\frac{1}{2}$ " . . . and solid metal that protects corner at point of greatest strain.
